Cities are where the jobs are

Cities play an important role as meeting places in knowledge-based economies such as that of the Netherlands. Personal encounters, whether planned or accidental, provide opportunities for the exchange of ideas and for learning from one another. The density of cities makes people more productive and enables the provision of higher quality and more varied services and amenities. Companies primarily locate in cities to be in close proximity to their customers and specialized suppliers, and because of the large and well-educated labour market and the many opportunities for cooperation. Business clusters create new job markets and opportunities for suppliers, which may create additional agglomeration benefits. In short, cities are where the jobs are.
