In 2011, the Netherlands used 5,258 petajoules of energy.

- 407 PJ by households
- 499 PJ by transport
- 1,375 PJ by industry
- 377 PJ by energy companies
- 598 PJ by other energy consumers (e.g., agriculture, horticulture, construction, trade, services, and government)

1 PJ is 277,777,778 kWh

One square represents 1 petajoule.
